All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

- 1. ☒ This communication is responsive to amendment filed 28 May 2004.

DETAILED ACTION

Allowable Subject Matter

Claims 1, 3-8, 11-18, and 20-21 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record, taken alone or in combination, fails to disclose or render obvious, a detector apparatus that includes pair of wave-shaping circuits provided with an offset setting unit that provides an offset to the voltages obtained by smoothing the voltage signals, and generates said binary signals using threshold voltages obtained by using said offset, in combination with the rest of the limitations of claim 1.

As shown in claims 6 and 13, the prior art of record, taken alone or in combination, fails to disclose or render obvious and method and apparatus for detecting movement of a movable member that includes rotating a speherical rotatable member, roataing an encoder disk about an X-axis in response to rotation of the spherical rotatable member, rotating an encoder disk which rotates about a Y axis perpendicular to the X axis; detecting movement in an X-Y coordinate system corresponding to a direction of rotation of said spherical rotatable member, in combination with the rest of the limitations of the claims.

As to claim 20, the prior art of record, taken alone or in combination, fails to disclose or render obvious a detecting apparatus that includes, a spherical rotatable member, an encoder disk which rotates about an X axis in response to rotation of said spherical rotatable member, and an encoder disk which rotates about axis perpendicular to said X axis, said pair of photoelectric elements individually provided for each of the encoder disks, wherein movement in an coordinate system, corresponding to a direction of rotation of said spherical rotatable member,

being detected based on said voltage signals of the phases A and B from the pair of photoelectric elements corresponding to one of the encoder disks, in combination with the rest of the limitations of the claim.

Regarding claim 21, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method for detecting movement of a movable member that includes arithmetically altering the smoothed voltage signals by adding the offset to or subtracting the offset from the smoothed voltage signals, in combination with the rest of the limitations of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
